2017 KCCS International Facial Lipoplasty Workshop

"SAFI with ADSCs"

Greetings dear colleagues!

This workshop is very meaningful for participants. "SAFI Book English version" is finally released. All students of this workshop will be given the copy of SAFI book complementary

To restore facial volume, artificial fillers have been most commonly used. However, to achieve natural results, various methods of autologous fat graft have been attempted and developed through trial and error.

Recent researches show that the use of ADSC in fat transfer significantly increases the survival rate and longevity of fat graft. Based on this fact, not only use of cell assisted-lipotransfer has increased rapidly, but it has also become one of the hottest attractions to the patients.

However, fat transfer surgery is not as simple as we all think. Nowadays, most cosmetic surgeons are aware that good and natural results are beyond excellent survival rate and longevity. There are many more factors to be considered.

We would like to commence a program which can provide basic training in the practical course of facial fat transfer including liposuction for harvest and utilization of ADSC, as well as advanced facial lipoplasty training for soft tissue contouring and volumetric lifting surgery.

This program will enable participants to understand the anatomy and aging process of the face. Participants can also have experience on different techniques. After attending this workshop, participants will have the ability to apply the techniques to achieve natural soft tissue contouring.
